

Eirwyn Zhang, MBA

Eirwyn Zhang is a technical architect and ecosystem builder who bridges the gap between advanced R&D, commercial strategy, and public policy. With over a decade of technical innovation experience and 5 years of P&L leadership, Eirwyn currently serves as Partner & Head of AI, where he commercialized proprietary Generative AI architectures (NeRF/3DGS) into high-margin assets. He complements this operational rigor with advanced research in Artificial Intelligence at the University of Pennsylvania and Generative AI at Carnegie Mellon University.

Beyond his technical expertise, Eirwyn is a prominent figure in the East Coast innovation corridor. He serves as the Program Director of the SNHU AI Summit 2024 and is an Organizational Member for the MIT Decentralized AI Summit 2025, roles in which he convenes top-tier researchers, founders, and industry leaders. An active 501(c)(3) co-chair and public speaker, Eirwyn operates at the intersection of technology and national security, engaging stakeholders from Manchester, NH to Cambridge, NYC, and Washington D.C.. His ability to mobilize networks across academia, government, and enterprise makes him a critical node in the ecosystem.
